J. LOCATION: (1)..(432)
J. OTHER INFORMATION: coding sequence of equine GM-CSF gene
US-09-589-460-8
Sequence 8, Application US/09589460
Patent No. 6645740
GENERAL INFORMATION:
APPLICANT: Bublot, et al.
TITLE OF INVENTION: Equine GM-CSF
TILE REFERENCE: 454313-2334.1
CURRENT APPLICATION NUMBER: US/09/589,460
CURRENT FILING DATE: 1090-06-07
PRIOR PILING DATE: 1999-06-10
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.0
SEQ ID NO 8
LENGTH: 435
                                                                                                                                                                                                                                                                                                                                                                                              Query Match 100.

Sequence 121, Application US/09451527
Patent No. 6492403
GENERAL INFORMATION:
APPLICANT: Sim, Gek-Kee
APPLICANT: Yang, Shumin
APPLICANT: Vang, Shumin
APPLICANT: Wonderling, Ramani S.
TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF
FILE REFERENCE: IM-2-C2
CURRENT APPLICATION NUMBER: US/09/451,527
                                                                                                                                                                                                                                                                                                                                                                                                                                   TCTGAAATGTTTGACCCTGAGGGGCCGAAATGCCTGCAGACTCACCTAAAGCTGTACGAG

Sequence 2706, Application US/09543679A
Patent No. 7034007
GENERAL INFORMATION:
GENERAL INFORMATION:
TAPPLICANT: NYCE, Jonathan W.
TITLE OF INVENTION: LOW ADENOSINE ANTI-SENSE OLIGONUCLEOTIDE,
COMPOSITIONS, KIT & METHOD FOR TREATMENT
OF ALKWAY DISORDERS ASSOCIATED WITH
BRONCHOCONSTRICTION, LUNG INFLAMMATION,

; Sequence 11, Application US/08284393B
; Patent No. 569234
; GENERAL INFORMATION:
APPLICANT: Zurawski, Sandra M.
APPLICANT: Zurawski, Gerard
TITLE OF INVENTION: MUTEINS OF MAMMALIAN CYTOKINES
NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS:
ADDRESSEE: DNAX Research Institute
STREET: 901 California Avenue
CITY: Palo Alto
STATE: California
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ZIP: 94304-1104
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: ISM FC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/284,393B
FILING DATE: 01-AUG-1994
CLASSIFICATION: 435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   13; Mismatches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            KSFKKNLKDFLFEIPFDCWKPAQK 144

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                  759
